

*Emory University:  
 Installation of Sanitary Sewer Flow  
 Meters*

<b>Project:</b>	Emory University Sanitary Sewer Flow Study.
<b>Client:</b>	McKim & Creed
<b>Location:</b>	Emory University, Decatur GA
<b>Completion:</b>	Completed

**Objective:** To establish regime of sanitary sewer system flows through Emory University Campus.

In 2012, McKim & Creed engaged MME to install sanitary sewer flow monitors and report on the sanitary sewer flow regime through the Emory University Campus. Consistent with its environmental advocacy, Emory University is committed to establishing a facility on its campus that would treat wastewater and re-use the treated wastewater for irrigation on other non-domestic purposes. This initiative will reduce the quantity of wastewater sent to DeKalb County for treatment and disposal while conserving the consumption of treated potable water by re-using the treated wastewater for irrigation. MME installed, calibrated and monitored the flow monitors and also provided detailed flow regime reports to facilitate the design of the wastewater treatment and re-use systems.
